MAD LAB Exp No: 5

Aim : To apply navigation, routing and gestures in Flutter app

Theory : Navigation and Routing in flutter.
flutter provides different ways to navigates between screens.
- Navigation.push() and Navigaton.pop - using for simple navigation
- Named Routers - useful for routing

gestures in flutter :
Flutter support gestures like taps, swipes and drags through. widgets like gesture Detector and Inkwells enabling uses.

conclusion :
Mastering navigation routing gestures is key to building interactive flutter apps, allowing smooth transitions and responsive user experience.
